MAIN PROJECTS

Fembot (v3.1.1) –

Fembot is a general purpose Discord bot that I've built via Discord.py / Discord API.

It is hosted on a Windows server, and has been cultivated for several years to achieve the desired results of those who originally commissioned the creation.

Rolling Hills Vet Portal –

This project was the final project of my Visual Basic/.NET class.

It aims to be the Vet-Technician's portal for customer / pet account creation, and provides a vast array of features such as appointment creation, admin controls, appointment review, and emailing patients w/ appointment details. (It is fully scalable & built with maintainability in mind)

EDUCATION

Spartanburg Community College, South Carolina —
Computer Science, Programming & Database

Udemy Coding Bootcamps, Online — *Computer Science*

- Python Intermediate to Expert
- Data Structures & Algorithms

RECENT EXPERIENCE

Petsmart, Spartanburg, SC – Associate

June 2021 – December 2021
